

DÉJÀ VU ALL OVER AGAIN: WHY NUCLEAR POWER STILL IS NOT THE "CLEAN AIR" ENERGY

**Monday, Nov. 12th
McHugh Commons
7pm**

**Prof. Robert Duffy, Chair,
Dept of Political Science,
Colorado State University**

Robert Duffy, chair of the political science department at Colorado State University, will discuss the perils of nuclear power. In recent years, advocates of the nuclear power industry have sought to position nuclear power as a safe "green" alternative to fossil fuels. Duffy will present his recent work, arguing that such claims by nuclear advocates are erroneous. Sponsored by the Project on Energy, Environment and Security at Colorado College.
